

Once a vehicle has been through the valet process, time and during winter may not allow the outside ambient temperature to dry the interior of the vehicle quickly enough. For this purpose we supply a valet dryer that consists of a blower, heater and two hoses that are inserted through the car windows. This heating of the interior greatly reduces the drying period.

## Features

- Stainless steel frame and covers
- Four sturdy castors for ease of movement
- Supplied with two reinforced drying hoses with supporting cage
- Over temperature thermostat protection

## Technical Specifications

## Kranzle Valet Dryer

Details	Valet Dryer	
Voltage	230V	400V
Connected load	32 A single phase plug	16 A Three-phase plug
Heating power	6kW	9kW
Hoses	2 x 2.5m	2 x 2.5m
Max. Temperature	72°C	72°C

*Increased productivity and time savings*
